PROFESSIONAL SUMMARY

AI Engineer with a Computer Science degree (GPA 4.50/5.0) and AI Specialization from KAUST. A 5-time Hackathon Champion who turns complex problems into production-ready AI systems — from concept to deployment. Deep expertise in LLMs, Computer Vision, NLP, and agentic AI, with a builder's mindset and a track record of winning government and national-level competitions. Equally comfortable in research and in fast-moving product environments.

EDUCATION & TRAINING

B.Sc. in Computer Science | University of Tabuk GPA: 4.50 / 5.0 *Graduated 2025*

AI Specialization Fellowship | KAUST *Oct 2024 – Jan 2025*

- Built and optimized foundational AI algorithms; processed large-scale NLP datasets in Python.

Data Science & AI Bootcamp | Tuwaiq Academy *Oct 2025 – Dec 2025*

- Built end-to-end ML pipelines and LLM-powered automation solutions integrated via RESTful APIs.

EXPERIENCE

AI Engineer | The Garage (Incubator) *Feb 2026 – Present*

- Developing an AI-powered drone platform inside The Garage incubator — from concept to product launch.
- Designed AI pipelines for autonomous decision-making, integrating computer vision into drone operations.

AI Developer | Savvy Games Group (Incubator) *Sep 2025 – Dec 2025*

- Built and integrated ML-driven features into a gaming product, enhancing gameplay systems and player experience.

AI Specialist (COOP) | Ministry of Health (MOH) *Jun 2024 – Aug 2024*

- Optimized CV and NLP pipelines for medical imaging and patient records at the Ministry of Health.

KEY PROJECTS

- MedinMind AI — Response Time Optimization:** Python spatial optimization algorithm that reduced API response times by 75–85%.
- RASD — Real-Time Threat Detection:** YOLOv8 pipeline for real-time automated threat detection on high-frequency data streams.
- Atqinha — AI Physical Therapy App:** Computer vision app for real-time posture estimation using pose detection models.
- Fateen — Personalized Learning Analytics:** LLM-powered app that analyzes academic data and delivers personalized improvement plans via generative AI.
- Emada Platform — Operations Automation:** Automated student activity workflows using AI to surface actionable insights and reduce manual effort.
- Nidaa — AI-Powered Emergency Dispatch System:** AI-powered EMS system with **SRCA & MOH** — cut peak-hour response times by **40%** via automated triage, biometric integration, and sign-language translation.
- ARK — AI-Powered Hunting Detection IoT:** Python/Arduino edge AI device that monitors sensor streams and triggers automated alerts in real time.
- Ayn — Data Quality Monitoring Platform:** LLM-powered data quality platform with real-time validation, business rules engine, and analytics dashboards. 2nd place — Statistics Authority Hackathon; recognized at the UN World Data Forum.
- Maeen — Multimodal Legal AI Interface:** Multimodal legal AI platform — 2nd place at Diwan Al-Mazalem Judicial AI Hackathon. Integrates CV gesture tracking, voice/text assistant, and smart mobile workflows for court beneficiaries.

TECHNICAL SKILLS

- AI / ML: LLMs, Computer Vision (YOLOv8), NLP, Deep Learning, Generative AI, Scikit-learn
- Programming: Python (Pandas, NumPy, PyTorch, TensorFlow), JavaScript/React
- Data Engineering: SQL (Advanced), ETL/ELT Pipelines, Relational Data Modeling, Data Quality & Validation
- Tools & Infrastructure: Git/GitHub, RESTful APIs, Firebase, Supabase, OpenRouter, LangChain, VS Code, Arduino

LANGUAGES

- Arabic | English
