PROFESSIONAL SUMMARY

AI Engineer with a Computer Science degree and hands-on experience building and deploying production AI systems. Specialized in LLM integration, computer vision pipelines, and data-driven automation. Delivered measurable impact — including a 75–85% reduction in response times on a real-world optimization problem. Skilled at translating business requirements into scalable, reliable AI products.

EDUCATION & TRAINING

B.Sc. in Computer Science | GPA: 4.50 / 5.0

Graduated 2025

AI Specialization Fellowship | KAUST

Oct 2024 – Jan 2025

- Built and optimized foundational AI algorithms using advanced statistics and calculus.
- Processed large-scale textual datasets in Python to deliver high-quality inputs for NLP models.
- Reduced computational overhead by optimizing algorithmic efficiency across data processing workflows.

Data Science & AI Bootcamp | Tuwaiq Academy

Oct 2025 – Dec 2025

- Managed end-to-end data lifecycle from raw ingestion to deploying deep learning architectures.
- Built LLM-powered autonomous solutions, optimizing data flows for task automation at scale.
- Integrated complex AI models into applications via RESTful APIs, ensuring data correctness and reliability.

EXPERIENCE

AI Specialist (Intern) | Ministry of Health (MOH)

Jun 2024 – Aug 2024

- Optimized data pipelines for medical imaging and patient records using advanced computer vision and NLP techniques.

KEY PROJECTS

- MedinMind AI — Response Time Optimization:** Engineered a Python-based spatial data optimization algorithm that cut API response times by 75–85%, directly improving system throughput and user experience.
- RASD — Real-Time Threat Detection:** Deployed YOLOv8 computer vision pipeline to process and validate high-frequency data streams for automated threat detection in real time.
- Atqinha — AI Physical Therapy App:** Built a Flutter & Firebase application using computer vision for unsupervised real-time posture estimation, ensuring data accuracy without human oversight.
- Fateen — Personalized Learning Analytics:** Developed an app that analyzes user academic data and delivers personalized improvement plans via LLM integration, combining structured data analytics with generative AI.
- Emada Platform — Operations Automation:** Automated student activity workflows by processing operational data to surface actionable insights, reducing manual effort across administrative processes.
- Nidaa — AI-Powered Emergency Dispatch System:** Developed an AI-powered EMS system with **SRCA & MOH** that cut peak-hour response times by **40%** using automated triage, biometric integration, and sign-language translation.
- ARK — AI-Powered Hunting Detection IoT:** Built a Python/Arduino IoT device to monitor sensor data streams and trigger automated alerts with time-based analysis, combining edge computing with AI inference.

TECHNICAL SKILLS

- AI / ML: LLMs, Computer Vision (YOLOv8), NLP, Deep Learning, Generative AI, Scikit-learn
- Programming: Python (Pandas, NumPy), Dart/Flutter, Java
- Data Engineering: SQL (Advanced), ETL/ELT Pipelines, Relational Data Modeling, Data Quality & Validation
- Tools & Infrastructure: Git/GitHub, RESTful APIs, Firebase, Cloud Services, VS Code, Arduino

LANGUAGES

- Arabic | English
